

DATA X LABS CAPSTONE PROJECT

E-Commerce Sales & Customer Experience

Interactive Dashboard Performance Summary, Multidimensional Revenue Analysis, and Strategic Optimization Roadmap.

 Executive Presentation

 Power BI Desktop

 Sales & CSAT Analytics

Project Objectives & Tech Stack

Business Goals

Deliver actionable commercial intelligence across total revenue (\$5.11M aggregate, \$472.45K filtered cohort), order volumes, basket size (\$1.02K AOV), fulfillment speed, and customer ratings.

Tools & Tech Stack

Built using **Power BI Desktop** with custom DAX data modeling, dynamic slicers for regional/category drilling, cross-filtering, and an executive dark-themed interface.

Analytical Scope

Evaluates three core layers: macroeconomic revenue trends, category and regional performance distributions, and customer satisfaction correlations with logistics and payment modes.

Sales Performance Overview

\$472.45K

COHORT SALES

462

TOTAL ORDERS

\$1.02K

AVG ORDER

Consistent Revenue Generation: The filtered North/Electronics cohort records \$472.45K across 462 orders, reflecting robust ticket size stability (~\$1.02K AOV).

Monthly Sales Stability: Multi-year trend lines indicate sustained baseline revenue performance across recurring seasonal purchase cycles.

CSAT Rating Baseline: Average satisfaction holds at 2.94 / 5.00, pinpointing immediate opportunities for post-purchase fulfillment improvements.

Category & Regional Analysis

Electronics

LEADING CATEGORY

\$472,450

NORTH TOTAL

4 Zones

EAST, N, S, W

Electronics Dominance: Electronics serves as the premier gross merchandise value driver, commanding dominant market share across regions.

Regional Market Footprint: Clear regional segmentation highlights the North market as a major revenue generator (\$472.45K in top category alone).

Untapped Category Potential: Beauty, Clothing, and Home categories represent high-growth whitespace for targeted bundle offers and cross-merchandising.

Customer Experience Insights

5.94 Days

AVG DELIVERY

2.94 / 5

AVG CSAT

Card Pay

TOP CHANNEL

No Linear Delivery Correlation: Scatter plot distribution proves customer ratings (1-5) are evenly dispersed across 1 to 10 delivery days, revealing speed is not the sole CSAT driver.

Payment Channel Preference: Credit/Debit card transactions lead total order count (~225+ orders), followed by Cash on Delivery (~148) and Digital Wallets (~89).

Experience Optimization: The sub-3.0 satisfaction index indicates that product quality, expectation matching, or packaging requires operational intervention.

Key Takeaways & Action Plan

Key Findings

Strong Financial Foundation: Solid unit economics evidenced by \$1.02K Average Order Value and steady multi-year run rates.

Category Dependency: High concentration in Electronics exposes overall revenue to cyclical fluctuations and component pricing shifts.

Satisfaction Disconnect: The flat ~2.94 rating distribution across all fulfillment timeframes highlights product/service quality gaps rather than transit speed.

Strategic Roadmap

Cross-Category Bundles: Pair top-selling Electronics with emerging categories (Home, Accessories) to drive multi-item baskets and margin diversification.

Root-Cause Quality Audits: Implement automated post-delivery surveys to pinpoint why rapid deliveries (1-3 days) still receive 1-2 star ratings.

Digital Payment Adoption: Incentivize Wallet and Card checkouts over COD with instant cashbacks to reduce logistics return overhead.
